

BRANDERS UNION

BrandBucket Search Evaluation

Winter, 2021

“I do want to [place] emphasis on the fact that we do not favor certain owners' or our own domain names over others'.”

—Julia, BrandBucket Staff, January 3rd, 2021

 - D. Number of Reported Sales for Each Keyword on Namebio

I. Introduction

BrandBucket has consistently said it does not favor anyone in its marketplace search results.

The seller community has long thought otherwise.

Any casual examination of domain ownership in a BrandBucket search mysteriously shows some sellers at the top of the results, again and again.

Further, unlike the other major marketplaces, the BrandBucket search is static. Its order never changes. On a marketplace of nearly 100,000 domains, whoever holds the top positions in the search results for a given keyword has a crushing advantage.

No matter how good a domain might be, if it is buried on page 47 of the search results, it is not likely to be discovered on the marketplace.

Following our mission to advocate for fairness on brandable marketplaces, Branders Union decided to take a closer look at the BrandBucket search.

After reviewing the ownership of the top 5 results across 100 popular keywords, the conclusion is unequivocal: **the BrandBucket search heavily favors a small group of sellers.**

This report details our study and calls for immediate changes to the BrandBucket search to ensure a fair, equal, and unbiased marketplace search.

II. Methodology

Our data sample consists of the top five domain results across 100 of the most popular keywords on BrandBucket, totaling 500 domains sampled.

The data was sampled on December 15, 2020.

Keywords

The top 5 search results were taken from the following 100 keywords:

Ad, Big, Bit, Blitz, Block, Blue, Bold, Boost, Bright, Capital, Cart, Central, Coin, Cosmic, Crowd, Crypto, Cyber, Defense, Double, Eco, Electric, Equity, Ever, Farm, First, Fiscal, Fuel, Fund, Funding, Go, Gold, Golden, Good, Grand, Great, Grow, Growth, Happy, Health, Healthy, Hello, Hey, Honest, Hype, Hyper, Joe, Launch, Lend, Logic, Love, Lux, Luxe, Magic, Major, Metric, Metro, Mighty, Miss, Mister, Modern, Neo, New, Next, On, Pep, Perfect, Pop, Primary, Profit, Pure, Ready, Red, Right, Secret, Share, Signal, Snap, Social, Sound, Special, Stack, Start, Startup, Stat, Steady, Stealth, Super, Sure, Swift, Swipe, Tech, Two, Ultra, Up, Urban, Venture, Web, Wild, Work, Zen.

These 100 keywords were chosen because they are some of the most popular keywords on the BrandBucket marketplace. To ensure an objective study, no ownership information for these domains was known prior to selecting the keywords.

The top five domains in the search results for these 100 keywords can be found in Section A of the *Appendix*.

Once all 500 domains were collected, we reviewed the ownership information for each domain to the best of our ability.

103 (21%) of these domains are private and the ownership is undiscoverable, meaning that the bias we uncovered is likely more pronounced than the results show.

III. Results

In our 500-domain sample of the top five search results across 100 popular keywords, five sellers had far more results than anyone else.

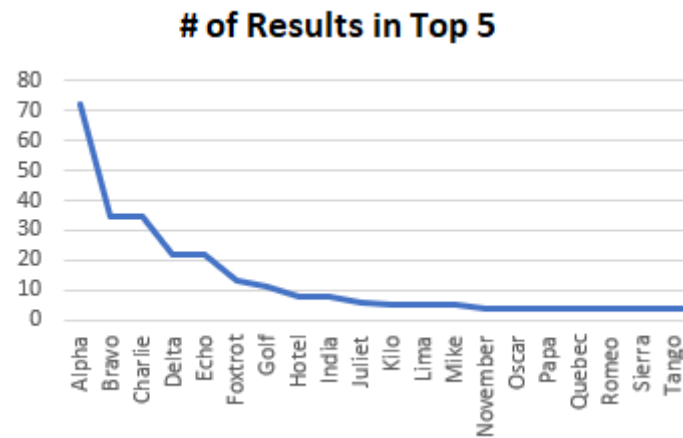

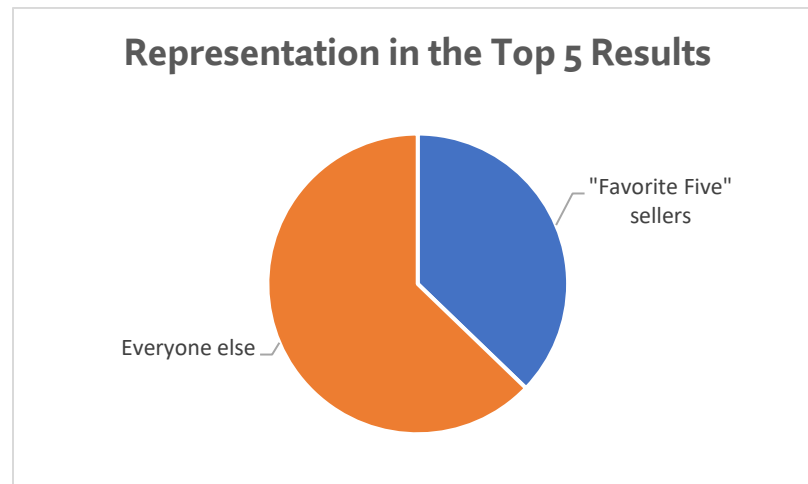

Figure 1. Five sellers stand above all others in the BB search results.

We do not name the sellers here but give them handles: Alpha, Bravo, Charlie, Delta, and Echo.

These “Favorite Five” sellers together own at least 186 of 500, or 37.2%, of the 500 premium positions examined.

Section B of the *Appendix* features a color chart, illustrating the domains each of these 5 sellers own across the 500 domains reviewed. This chart is a dramatic illustration of the substantial advantage these 5 sellers have in the search.

Portfolio Size

One might think that the five sellers who have the greatest representation in the top 5 positions in our sample might have these favored positions simply because they own a large number of domains on the marketplace. If the outsized representation was directly proportionate to the size of these portfolios, then the search could still be unbiased.

This is not the case, however. In at least some of these cases, where we know the portfolio size of the seller, the favoritism is substantially *disproportionate* to portfolio size.

For example:

At the time the sample was taken, Alpha had a very large portfolio of 8,407 domains, representing 8.9% of total marketplace domains. While Alpha had 8.9% of domains on the marketplace, 14.4% of Alpha's domains were listed in the top 5 results in our sample data. 14.4% of domains in the top 5 is substantially greater than Alpha's 8.9% of holdings in the marketplace.

By contrast, Foxtrot, a seller who is not among the five favorites, had a portfolio of 4,472 domains when the sample was taken. Foxtrot had 4.74% of the total domains on the marketplace, yet only 2.6% of Foxtrot's domains were listed in the top 5 results in our sample data.

Alpha had 8.9% of all domains, yet 14.4% of Alpha's domains were in the top 5 results.

Foxtrot had 4.74% of all domains, and only 2.6% of Foxtrot's domains were in the top 5 results.

The example of Alpha (a favorite) vs. Foxtrot (not a favorite) suggests the top 5 favorites are heavily favored over all other sellers, regardless of portfolio size.

Quality

Some might say, “maybe these portfolios have high quality domains, and that is why they are at the top of the results.”

Except for Echo’s domains, the domains in the top 5 results are generally not of higher quality than the other results.

In fact, at times it is highly questionable why certain domains appear in the top 5 results for a given keyword at all:

Keyword	Top Result	Owner
Class	Verderi.com	“Charlie”
Gold	Fezora.com	“Charlie”
Green	Verdexo.com	“Charlie”
Pets	Gatly.com	“Charlie”

Red	Rozero.com	“Charlie”
Speed	Mercalix.com	“Charlie”
Star	Novatta.com	“Charlie”

The above domains are not particularly exceptional or relevant, nor of such quality that the top result seems justified.

Only when we look at the owner of each domain, “Charlie”, a Favorite Five, does it begin to make sense why these domains are listed in the first position.

Pricing

Some might say, “maybe these domains have higher prices and that is why they are in the top 5 of the search”.

The following chart breaks down the average price of the Favorite Five’s listings in our 500-keyword sample:

Alpha	\$5,114
Bravo	\$3,248
Charlie	\$4,757
Delta	\$4,483
Echo	\$36,860

Echo’s pricing stands out as substantially higher, which could justify preferential positioning.

Alpha, Bravo, Charlie, and Delta’s average pricing is in line with average pricing for other names on the marketplace. At the time this sample was taken, the average price of a BrandBucket domain was approximately \$4,162.

Complete pricing data for the 500-name sample is included in Section C of the *Appendix*.

Other Notable Facts

The 5 favorite sellers (Alpha, Bravo, Charlie, Delta, and Echo) had at least 1 result in the top 5 positions of 83 of the 100 keywords reviewed.

# of Top 5 Results Held by Top 5 Sellers	Out of 100 Keywords
0 of 5	17
1 of 5	29
2 of 5	23
3 of 5	16
4 of 5	12
5 of 5	3

In 12 of 100 keywords, “Capital”, “Cyber”, “Farm”, “Hello”, “On”, “Profit”, “Red”, “Share”, “Social”, “Sound”, “Stack”, and “Start”, members of the 5 favorite sellers owned 4 out of 5 of the top results.

In 3 of 100 keywords, “Cart”, “Two”, and “Work”, members of the 5 favorite sellers owned all 5 of the top 5 results.

In 1 of the 100 keywords, “Two”, *the same seller* (who we call “Charlie”) owns all 5 of the top 5 results.

IV. BrandBucket's Response

Before publishing this report, we reached out to BrandBucket for comment. We include an unedited copy of the company response below:

1. The keywords you chose are "popular" not because a) they sell well or b) because buyers are looking for them. For truly popular words that sell and that buyers want you can look at what public sales data there is from around the web.

Your definition of "popular" in many cases is because one particular seller really likes that keyword, and has a very large percentage of the names of that keyword, and all other sellers that have names of that keyword are copycats trying to follow a style.

Seller Alpha for example grew up on a farm and their current occupation is farming. Logically, knowing anything about the internet in general, do you think we sell a lot of farm names? Or that we have a lot of farm buyers? Most are good names and long holds, but we wouldn't consider them "popular" by any measure of buyer interest.

Seller Delta started the whole trend of Miss and Mister...happens to own most of those names, and also happens to have the best taste in those names. Do they sell well? Not particularly. A very large portion of BrandBucket's inventory is driven by the taste of few and a whole lot of copycats. We accept all decent names, but sometimes the amount of a certain keyword becomes very lopsided compared to its popularity with buyers because of this trend. It is why we are constantly pushing sellers to find their own style and voice.

2. As a couple of people on Namepros have hypothesized in the past, the BrandBucket age of each domain does come into play, but does not take priority over other meta data that is more relevant to the buyer's query. This is a subtle reward for long-time, loyal sellers, and also works to somewhat counteract the fact that All Names and categories are ordered newest->oldest.

The BrandBucket age can be seen for each name in the backend . When a name is removed its age resets to zero.

The boost of a name in search results is per name and does not take into effect who the owner is. A new seller could purchase an old name and it would retain the same boost. So if you were to purchase adesca.com from Alpha seller at some point in the future, I can assure you that it would still show up first in the search results when looking for 'ad'.

Again, we appreciate the overall findings in the results, and we are already underway with some changes that you have pointed out -- including more dynamic results based on each unique visitor --that will hopefully clear up everyone's doubts about BrandBucket search feature. However, we feel it will be much more accurate and less fear-mongering if the report is redone with keywords that are actually popular with buyers and not derived from what keywords BrandBucket's inventory is heavy on.

After reviewing this response, our members offer the following observations:

BrandBucket writes: "Your definition of "popular" in many cases is because one particular seller really likes that keyword, and has a very large percentage of the names of that keyword, and all other sellers that have names of that keyword are copycats trying to follow a style."

BrandBucket suggests the bias found in the report is due only to the fact that the keywords included are popular only among certain sellers.

We do not agree that keywords being popular among certain sellers explains the bias uncovered. There might be a few instances of this, but we think the sample size of 100 keywords demonstrates a bias not just among a few favorite keywords but across the entire BrandBucket marketplace.

It is also important to note again that the bias uncovered only favors five sellers. We're sure that many other sellers have listed multiple domains under a favorite keyword, yet we do not observe a similar top-loading of results for anyone outside of the "Favorite Five" sellers.

BrandBucket writes: *Seller Alpha for example grew up on a farm and their current occupation is farming.*

In our 100-word study, seller Alpha is not just favorited for "farm" results. Alpha has multiple names in the top 5 positions for the following words:

Capital, Cart, Coin, Fund, Grow, Hello, Joe, Logic, On, Profit, Share, Stack, Start, Venture, and Web.

The favoritism in the results for these keywords cannot be explained away by any idiosyncrasies in Seller Alpha's personal background. Most of these keywords are commonly valued among domain investors because they sell.

BrandBucket writes: *The BrandBucket age of each domain does come into play, but does not take priority over other meta data that is more relevant to the buyer's query.*

We appreciate that BrandBucket has disclosed that a domain's BrandBucket age plays a role in search rank, and it is possible that some of the uncovered bias is a result of BrandBucket-aged domains.

We maintain that—regardless of the cause of the bias—there should be no bias.

In our view, the BrandBucket search algorithm should focus on helping buyers find the best possible name for their business. It should not, in our view, reward certain loyal sellers at the expense of others.

BrandBucket writes: *“We appreciate the overall findings in the results, and we are already underway with some changes that you have pointed out – including more dynamic results based on each unique visitor – that will hopefully clear up everyone’s doubts about [the] BrandBucket search feature.”*

For years, BrandBucket has been promising the seller community that it will update its search algorithm. Year after year, BrandBucket has postponed these updates in favor of other priorities.

We hope this report helps to bring about a fair and balanced search in the very near future.

BrandBucket writes: *“We feel it will be much more accurate and less fear-mongering if the report is redone with keywords that are actually popular with buyers.”*

This report is not intended to be “fear-mongering.” It sheds light on what the seller community has long perceived as a problem and suggests a positive way forward.

Regarding the comment that the report does not cover keywords that are “actually popular with buyers”:

- 1) Most of the keywords covered in this report are popular with buyers. To demonstrate this, we reviewed the number of reported sales for each keyword on NameBio. The results are logged in Section D of the *Appendix*.
- 2) Even if the keywords we covered were less popular with buyers, we maintain there should be no favoritism in the BrandBucket search, period. If the favoritism existed only on less popular keywords, this would still be a cause for concern.

V. Conclusion

We believe this evaluation demonstrates clear favoritism toward five sellers (Alpha, Bravo, Charlie, Delta, and Echo) in the BrandBucket search.

We cannot say why this favoritism exists, or whether it is deliberate or unintentional.

The favoritism inevitably results in a higher sell-through-rate for these five sellers because these five sellers' domains have much greater visibility on the marketplace.

Given this disappointing conclusion, we, the members of Branders Union, call for immediate action to ensure a fair, equal, and unbiased marketplace search.

The new search should be *relevant*, featuring keyword matches first, and *dynamic*, so that different relevant results appear at the top each time.

Some of us are also concerned that the favoritism uncovered in the BrandBucket search extends to other parts of the marketplace. If there is favoritism in the search, these members wonder if there is also favoritism in marketing, reviews, appeals, sales inquiries, and more.

It has recently come to light, for example, that some sellers have been permitted to list their BrandBucket inventory on Afternic, while the majority are still prohibited from doing so.

The potential for favoritism in many areas of the marketplace is particularly concerning as BrandBucket itself is amassing a large percentage of domains on the marketplace by purchasing them through seller liquidation.

BrandBucket is a treasured institution in the domain community. Many of us have had great success with BrandBucket, and we are grateful for the opportunities the marketplace gives us.

In light of the results of this report, we believe it is vital for BrandBucket to immediately address the favoritism in its search as well as pledging to the seller community that, moving forward, no sellers will be given special treatment in any way.

We look forward to BrandBucket's swift response.

Sincerely,

Branders Union

D. Number of Reported Sales for Each Keyword on Namebio

To demonstrate the commercial value of each keyword in the report, we referenced the number of sales reported in an “anywhere” search for each keyword on NameBio.

The average number of reported sales among all 100 keywords is 2,421.

The median number of reported sales among all 100 keywords is 630.

These numbers show that the keywords in the report have substantial commercial value.
